## RENAISSANCE REVIEW

Imagine the Look, Create the Dream...

Valentine's Day is around the corner! Let us help you look and feel your best.

### HOT OFF THE PRESSES: FDA APPROVES RADIESSE!

The Food and Drug Administration (FDA) recently approved Radiesse as a filler for moderate to severe facial folds and wrinkles, including nasolabial folds. This is “The Longest Lasting Synthetic Filler” offered at The Aesthetic Surgery Center! It is ideal for deep smile lines and folds.

Because of its architecture, Radiesse forms a “scaffold” that stimulates the natural growth of a patient’s own collagen. It will last about 9-12 months, but the new collagen growth may sustain the results even longer. Our physicians have been using the product for facial augmentation for almost three years, and it is their material of choice for the deeper folds and wrinkles on the face.

Please call 239-594-9100 to schedule your treatment!

### Firm up your skin with the brand new SKIN TYTE BBL Treatment!

We have added the new SKIN TYTE Accessory to our Sciton BBL Machine this month. This innovative new technology is used to selectively heat the dermal collagen deep in your skin while simultaneously cooling the epidermis (outer layer of skin) prior-to, during, and after treatment, reducing discomfort and minimizing thermal injury to non-target skin and skin structures. The result is partial coagulation and contraction of collagen.

This treatment takes about 45 minutes, and is done in the office. The most commonly treated areas are the face and/or neck. You will notice tighter skin, and over a series of about 3 treatments spaced 4 weeks apart, smoother skin. There is minimal facial swelling for the first day, but no break in the skin. You can wear make-up immediately.

Call 239-594-9100 to schedule your first treatment!

## RENAISSANCE REVIEW

Imagine the Look, Create the Dream...

### Mexoryl SX Sunscreen FDA approved in the United States!

This is the first time since 1988 that the FDA has approved a sunscreen filter. Mexoryl SX is highly effective against short UVA waves. UVA waves account for over 80% of the damage that occurs to skin in terms of aging. They even penetrate through clouds and windows! It is critical to protect not only against UVB waves, which cause skin cancers, but also against these aging UVA waves.

Anthelios SX SPF 15 (by La Roche-Posay) has a unique combination of Mexoryl SX, Octocrylene, and Avobenzone, which offers coverage against both UVB waves and short and long UVA waves. This fragrance and oil free formula caters to the most sensitive skin, and is perfect for daily use under your make-up. Anthelios SX is now available at The Aesthetic Surgery Center!

### Take care of your brown spots with BBL Treatments

This is the perfect time to wipe away your brown spots! Whether they are on the face, neck, chest, or hands, the BBL offers a quick solution. The procedure is performed in the comfort of our office laser suite.

The treated area can be covered with make-up the same day as there is no break in the skin. The brown spots will darken initially, and then speckle and fall off in about one and a half weeks. The procedure has soared in popularity because of its superb results.
