RENAISSANCE REVIEW

Imagine the Look, Create the Dream...

Plump up those earlobes!!!

As a result of the aging process and a lifetime of wearing earrings, one's earlobes often become stretched, thin, and floppy. Earrings can hang downward in an unsightly fashion. This can be addressed in one of several ways. The easiest way is to plump up the earlobes with an injectable filler like collagen, Restylane or Juvederm. This will firm up the thinned earlobes, and provide support for larger earrings.

Alternatively, if the earlobe piercing is elongated, or the earlobes are just too large, these issues can be surgically addressed under local anesthesia. Elongated earring holes are sutured, and large floppy earlobes can be reduced.

The UpLift Facelift Surges in Popularity...

There are several things that have made the UpLift one of our most popular procedures:

1. Significant improvement in the jowl and upper neck area
2. Performed with local anesthesia
3. Quick return to social functioning

It has been almost 5 months since Sharon's UpLift procedure!

Try Jane Iredale's New Tinted Moisturizer

new release
DREAM TINT

Just in time for summer, Jane Iredale has released the first and only tinted moisturizer with a sunscreen (SPF 15), which still maintains the high standards of mineral make-up.

Not only does it go on smooth and light, it calms the skin and helps to minimize the appearance of pores. This is a summer must have!
