RENAISSANCE REVIEW

Imagine the Look, Create the Dream...

Hand Rejuvenation in Minutes!!!

Before

After

Aging hands are often a dead giveaway of someone's age, especially after they have had a facelift to rejuvenate their face. In addition to cumulative sun damage, the hands tend to lose their youthful fullness as we age. Two low down-time office based treatments are now available to freshen up the hands.

Radiesse is an injectable filler, lasting about a year, which can be injected under the hands to plump up aged, or cadaveric hands, that have lost soft tissue volume. In addition, Broadband Light (BBL) treatments can take away the brown spots, leaving a smooth complexion. The combination of these treatments, as depicted in the before and after photographs above, can truly "turn back the hands of time."

Please call 239-594-9100 to schedule your treatment!

Seminar Season is here!!

Our informative seminars are the perfect way to see what we have to offer. The latest surgical procedures, injectable options, and lasers will be discussed. Dr. Maloney's seminars are held at the Ritz Carlton Beach Resort in Naples, while Dr. Agarwal's seminars are held in our office, with a live Arctic Peel demonstration to follow.

The seminar dates and locations are listed on our website! Bring a friend and make it a great event!

RENAISSANCE REVIEW

Imagine the Look, Create the Dream...

ArteFill is FDA Approved!!

A new option for long lasting wrinkle correction!

We are excited to add ArteFill to our injectable armamentarium. This is the first non-resorbable filler material to be FDA approved. It is ideal for someone who has had a filler in the nasolabial folds previously, but would like a long term solution. It is composed of polymethylmethacrylate beads, bovine collagen, and lidocaine. It does require a skin test in the forearm one month prior to injection to rule out an allergy to collagen.

The way that it works is that the bovine collagen is gradually resorbed over a period of 2-3 months, and the PMMA beads serve as a scaffold for your own collagen growth. Most commonly, a touch-up treatment is required at about 3 months, but after this, the results continue to improve over time. Data from long term follow-up in Canada and Europe demonstrate persistent improvement from 1 to over 5 years! Although the cost is higher than other fillers, it is offset by the reduced number of treatments required. Call today to schedule your treatment!

Lead in Lipstick?????

On October 11, 2007, a story was released by the Campaign for Safe Cosmetics, indicating that popular brands of lipstick contain lead, which can be harmful to your health. In fact, 61% of brand name lipsticks tested contained detectable levels of lead. Pregnant women and young children are at higher risk of complications from lead neurotoxicity.

Jane Iredale has taken the initiative to test all of its products for lead, and there were NO traces of lead found in any product, including lipstick. The Aesthetic Surgery Center and Face Spa continue to support Jane Iredale Mineral Cosmetics as makers of top of the line, safe products.
