RENAISSANCE REVIEW

Imagine the Look, Create the Dream...

Dear Anurag,

Aesthetic Surgery Center's physicians performing ThermiTight to face and body! Check out our new video....

ThermiTight™ is a procedure performed by our physicians at the Aesthetic Surgery Center, utilizing the ThermiRF Radiofrequency skin tightening technology. This is a new technology whereby a fine temperature regulated probe is inserted under the skin to deliver heat directly to the dermis and subdermis. Heating of these layers has been shown to induce skin tightening by collagen contraction and remodeling. Results are seen 2 to 12 months after a single treatment. The ideal candidate has loose skin, with limited excess fat, although it is possible to combine this procedure with liposuction if desired. The most commonly treated areas are the jawline and neck, upper arms, abdominal wall, thighs, and knees. Our plastic surgeons at the Aesthetic Surgery Center are proud to be the first to offer this exciting new technology in the Naples, Fort Myers, and Marco Island area. Please click on the link below to watch our doctors at work...

Will I have scars after breast lift surgery? By: Dr. Kiranjeet Gill

Breast lift surgery, also known as mastopexy, is designed to reposition and reshape the breasts to more youthful and pleasing aesthetic position. This is fashioned by removing excess skin and reshaping the underlying breast tissue. Many of my patients ask “will I have scars on my breast?” The answer is yes, but the amount of scars depends entirely on the level of breast ptosis, otherwise known to all of us as “saggy breasts.”

What kind of scars can I expect?

Several techniques of breast lift surgery are performed in the United States. The most common of which include the periareolar mastopexy, vertical scar or “lollipop” mastopexy, and Wise-pattern (anchor or inverted T) mastopexy. In general, the greater the breast ptosis, the more scars required to create an adequate breast lift. All of these techniques involve a scar around the areola at the interface between the darker areola and surrounding breast skin. Vertical mastopexy incorporate a scar that extends from the bottom of the areola to the inframammary crease, and accordingly the inverted T, adds a scar in the inframammary crease itself. Although the scars may seem extensive, most scarring fades with time and is not visible in a moderate coverage bikini top or swimsuit. And, the result is uplifted breasts that require less scooping into pushup bras and overall better aesthetic appeal.

Can I undergo Breast Augmentation at the same time as Mastopexy?

The answer is yes. Single stage mastopexy augmentation combines breast lift surgery and breast augmentation in the same surgical setting. By placing an implant at the time of your breast lift, you will enhance the overall shape of the breasts, specifically in the upper pole and cleavage, areas most women would like improved. These surgeries may also be performed in a stage approach- breast lift first, followed by breast augmentation 3-6 months later. Your plastic surgeon may recommend a staged mastopexy augmentation if there are certain risk factors in your history that preclude a single stage approach.

To schedule a consultation to learn about breast lift surgery, please contact the Aesthetic Surgery Center to book an appointment with [Dr. Kiranjeet Gill](#) (239-594-9100)

July is Sun (UV) Safety Month. Put sun protection IN your skin!

Daily, our practice sees the adverse effects of sun damage to our skin, especially our face and neck. The effects can be devastating. Here is an advanced way to preserve and prevent.

Dr. Richard Maloney has developed a unique SPF 30 moisturizer that can be used on your skin under make-up everyday. It combines the benefits of botanical antioxidants in his other products with safe and effective Sunscreens for day long protection and moisturizing of your skin.

Signature Skin SPF 30 absorbs into the skin, eliminating the thick pasty appearance of other products. It is anti-inflammatory, ideal for all skin types. Use it for Golf, Tennis, Biking Skiing or any outdoor event as well...you will not sweat because of your sunscreen. It is in, not on your skin. Signature Skin SPF 30 is available for purchase at the Aesthetic Surgery Center.

Dr. Agarwal serves as guest examiner for the American Board of Facial Plastic and Reconstructive Surgery certification exam, June 2015.

The annual ABFPRS board certification exam is held in June at the Ritz Carlton, Pentagon City. As in prior years, Dr. Agarwal traveled to Washington D.C. last week to serve as a guest examiner for the board. He is proud to be one of select surgeons from across the country to be chosen for this honor.
