Rhinoplasty can make a profound improvement in one's profile as well as help to accentuate the natural beauty of one's eyes. This patient underwent a rhinoplasty by Dr. Agarwal, to give her a more feminine, refined nose. She is shown before and almost one year post-operatively.

Our 3 board certified surgeons are skilled in the art of rhinoplasty, which is one of the most complex yet rewarding plastic surgery procedures. Please visit our website by clicking on the link below to learn more about rhinoplasty.

Tretinoin (also known as "Retin-A"), was originally developed about 50 years ago. It is a topical cream applied to the face to reduce the appearance of fine lines and wrinkles, reduce acne, improve pigmentation, and improve the texture and tone of the skin. Dr. Agarwal believes that is beneficial to the majority of his patients both as a therapeutic medication, but also as part of a preventative anti-aging skin care regimen.

In order to minimize some of the unwanted side effects of peeling, dryness, and irritation, Dr. Agarwal recommends adding lactic acid to the Retin-A cream, which can be compounded together. Several controlled studies have shown that lactic acid, an alpha hydroxy acid (AHA) found as a natural component of human body tissue, causes increased production of hyaluronan (moisturization) in both the dermis and epidermis. Practically speaking, this means that the side effects of dryness, peeling, and tingling from Retin-A can be minimized by the moisturizing effects of lactic acid. Your skin will also have a healthier glow with the increased moisturization.

At the Aesthetic Surgery Center, our physicians custom order the appropriate percentages of tretinoin and lactic acid in a compounded cream that is then delivered to your home. Please call 239-594-9100 if you would like more information.
