

1 year post-op Uplift™ by Dr. Agarwal

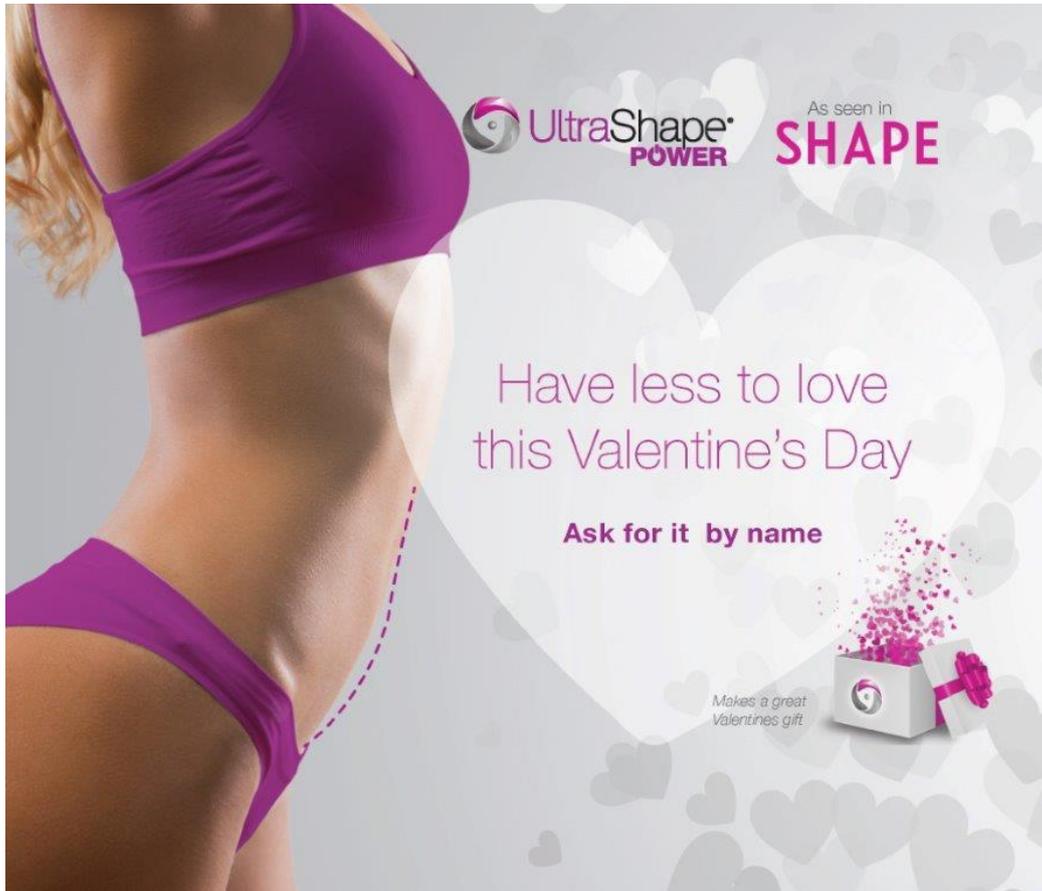

"What does the Uplift™ lower face and neck lift do and what distinguishes it from other facelifts?"

This procedure is designed to specifically target the jawline and neck. It does not include midface or browlifting. Aging changes of the neck and jawline, such as jowling and "turkey neck", are often noticed first during the aging process. This usually involves an element of descent of facial tissues, weakening of facial ligaments, and laxity of facial and neck muscles.

The Uplift™ is not a "mini lift", because it doesn't just tighten the skin. It is based on the premise of vertical lifting of the underlying facial muscle layer. Skin tightening alone gives a very short lived result, as skin has an inherent tendency to "creep", or stretch back after a facelift. During an Uplift™, the muscle layers are lifted and tightening maximally, giving longevity to the result. One of the key differences in elevation of the SMAS layer is the vertical direction of the lift, based on how our surgeons make their underlying SMAS incision, and how the SMAS is rotated. The SMAS is not pulled back as in traditional facelifts. There is an extended elevation of the SMAS flap, deep to the SMAS, to be able to mobilize the facial tissues. Unlike classic "deep plane lifts", there is no incision in front of the sideburn and along the temple hairline, which can be visible when the hair is worn up and back. Depending on the patient, an incision under the chin may or may not be necessary.

We invite to you read more about the Uplift™ on our informative website, and be sure to check out our photo gallery to see numerous examples of our work. Please call 239-594-9100 to schedule your Uplift™ consultation.

Unlike other popular body contouring procedures, UltraShape® doesn't require extreme heat or cold to destroy fat. Instead, it harnesses ultrasound waves, which shake the fat cells until the membranes collapse. Then the destroyed fat cell particles are filtered through the liver and digested through the body—just like fat from a meal. Interestingly, this process doesn't harm any of your tissues, blood vessels or nerves, so there's no recovery time. UltraShape® is ideal for those who have stubborn fat deposits along the abdomen, flanks, or thighs that are resistant to diet and exercise. Generally three treatments are needed.

The normal price for 3 Ultrashape® treatments averages \$2500 per site. For the months of February and March 2021, take advantage of our discounted price of \$2250 per site (includes three sessions). Please call 239-594-9100 to schedule your Ultrashape® appointment with one of our seasoned aestheticians.
