**Casey J Holmes MD** Plastic Surgeon

Abdominoplasty or a tummy tuck is a procedure that restores the abdominal wall's natural contour and removes excess skin and fat. The muscles on the abdominal wall are strengthened and returned to the proper location in the midline, which allows Dr. Holmes to assist his patients with their goal of reshaping the abdomen, waist, and mid-section contour.

Ideal candidates for a tummy tuck are those individuals who exercise and maintain a healthy diet, but still have excess abdominal fat and skin sagging. Abdominoplasty provides the patient with a flatter and aesthetically pleasing abdominal contour that is proportional to their physique and weight.

If you are interested in improving your self-image and confidence with a tummy tuck, please call 239-594-9100 to schedule your consultation with Dr. Casey Holmes.

## MCA Stretch Mark & Scar Treatments

Multi-Trepannic Collagen Actuation (MCA) also known as Medical Dry-Needling or Medical Micro-Needling, is a non-surgical way of effectively softening and relaxing scar tissue. This specialized needling technique creates precise and controlled microtrauma to the damaged skin tissue, which stimulates and controls the natural healing process. MCA treatment triggers natural cell regeneration, collagen, and elastin production, which enables skin repair, skin rejuvenation, and re-pigmentation.

The dry needle technique is done through a medical tattooing machine. The needle enters the skin just enough to cause minor trauma, which simulates blood flow to the treated area. Improvement of 20%-50% can be seen in just one treatment. For optimal results, we would recommend 3 or more treatments 5-6 weeks apart.

Please call us at 239-594-9100 to schedule a consultation with Ilaria Deidda, Licensed Aesthetician, Permanent Makeup and Medical Tattoo Artist. During your consultation, Ilaria will answer all your questions and recommend a personalized treatment plan for optimal results.
