## Uplift<sup>TM</sup> lower face and neck lift with chin augmentation

What do these two patients have in common? They both are in their early 60's and wanted to improve their neck line. Both had deficient chin projection in addition to neck laxity and deep neck fat prominence.

Dr. Agarwal treated each of them with an Uplift<sup>TM</sup> lower face and neck lift with deep neck contouring, platysma muscle suspension, and insertion of a permanent silastic chin implant. This gave them a better angle to their neck line on profile, and a defined jawline. These types of results can improve one's self esteem, improve the look when wearing collared shirts, and overall restore one's youthful appearance.

If you are interested in learning more about this type of lower face and neck surgical contouring, please call 239-594-9100 to schedule your consultation with one of our board certified surgeons.
