What is a Hairline Lowering Forehead Reduction?:

This is a 35 year old woman who had a high forehead with high frontal hairline. She wanted to lower her hairline with a single stage procedure. She is shown before and 6 months after Dr. Agarwal performed a hairline lowering forehead reduction surgery (1.6cm vertical height reduction). Even with the hair pulled back, the hairline lowering scar is only visible as a fine white line, which is the main tradeoff with this procedure. However, one can see how the lowered hairline frames her face better and in a more feminine way.

Please call 239-594-9100 if you would like to schedule a consultation for hairline lowering forehead reduction surgery.

Under eye hollows can be treated using injectable fillers, but must be done with care. It's better to use less than more, as the area can easily swell. Because the skin is thin in the tear trough region, the filler must be placed close to the bone with very gently movements and small aliquots. Of note, filler will not eradicate under eye bags caused by excess fat bulging forward.

The link below will give you access to the video where Dr. Agarwal injected his nurse, Kelly, with Volbella under the eyes. The above photos depict the treated side vs. the untreated side, showing the instant improvement. Please watch the video in real time with sound.
