The Arthrex ACP system
concentrates platelets at 2.3x over baseline^{1,2}

Introducing Platelet Rich Plasma Skin Application with Microneedling in our Skin Spa!

Platelet-rich plasma, usually shortened to PRP, is a concentrated portion of your own blood that contains platelets and the growth factors those platelets release. It is prepared during your appointment from a small blood sample, so no donor material or manufactured product is involved. We use the Arthrex ACP double-syringe system, a closed preparation system with a 15 year track history that maximizes platelet yield, and minimizes damaging neutrophil concentration.

Microneedling is a treatment in which a handheld device passes over the skin and creates thousands of tiny, controlled channels in the surface. These microchannels are small enough to close quickly, yet significant enough to signal the skin to begin its natural repair sequence.

When the two are performed together, the PRP is applied to the skin immediately after microneedling, while the channels are still open. This timing allows the growth factors to reach the deeper layers of skin where collagen is produced, rather than sitting on the surface as most topical products do.

What this does for you:

- Improves fine lines and skin texture
- Helps to reduce enlarged pores
- Gives a brighter, healthier skin complexion

Our Skin Spa uses the Arthrex ACP double-syringe system, a closed preparation system that has been in clinical use for more than fifteen years.

☎ Please call [239-594-9100](tel:239-594-9100) to schedule your PRP treatment/microneedling treatment with one of our licensed medical aestheticians!

Long term Uplift™ Results

The Uplift™ lower face and neck lift is a deep plane facelift, that lifts the lower cheek, jawline and neck. The work takes place below the facial muscles with a comprehensive release of deeper attachments, which allows the facial muscles and overlying skin to slide upwards without tension.

At 4 years post-op, this 65 year old woman still has excellent face, jawline and neck contour. While a facelift doesn't stop the aging process from continuing, it sets the clock back.

This patient underwent the following procedures by Dr. Anurag Agarwal:

- Uplift™ lower face and neck lift with platysmaplasty and submandibular gland reduction
- Fat transfer to tear troughs, infraorbital rims, and cheeks
- Fractional CO2 laser of her lower eyelids

A smoother core, a stronger silhouette

This abdominoplasty result highlights a dramatic improvement in abdominal contour - removing excess skin, tightening underlying muscles, and restoring a flatter, more defined midsection. The waist is more sculpted, and the overall shape is balanced and refined.

It's not just about looking better, it's about feeling confident in your body again.

If you are interested in an abdominoplasty consultation with Dr. Casey Holmes, Board certified Plastic Surgeon, please call [**239-594-9100**](tel:239-594-9100).
